

INTRODUCING THE NEW DEKK **HERCULES**

SKIDSTEER RUBBER TRACK RANGE

OUR IMPROVEMENTS

1 Redesigned the tread pattern by adding the Hercules Armour between the treads to absorb machine operating forces and protect the track from the outside. Resulting in a massive 16.5% decrease in stress on the track.

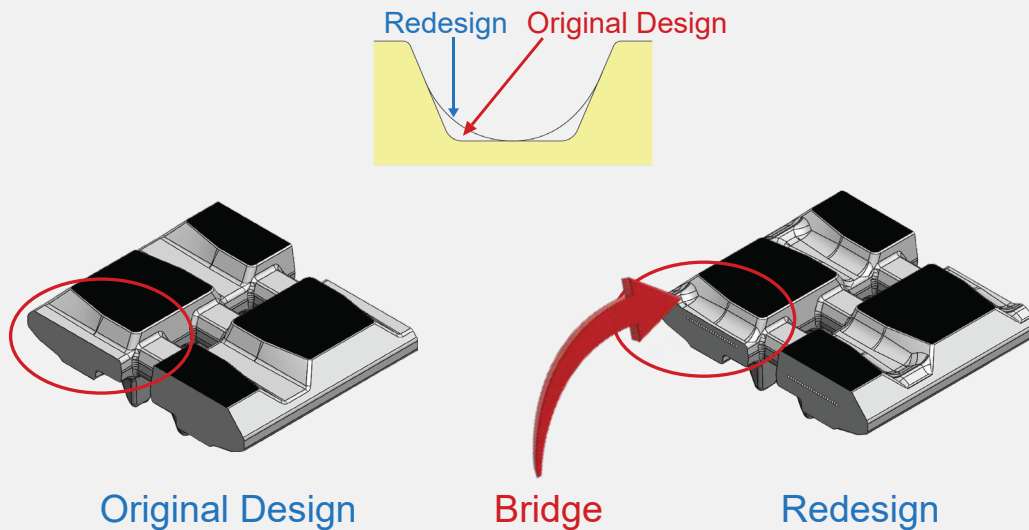

2 Redesigned the edge profile of the treads to reduce the concentrated force at the base of the treads to re-direct the force on the track and further protecting the core of the track

3 Upgraded reinforcement of the tracks by using a 15% higher tensile steel cable than other brands, further strengthening the carcass of the track.

4 Changed cable locations to deeper in the rubber and increased cable reinforcement to optimise overall structural integrity

FEATURES

RE-DESIGNED TREAD PATTERN

TENSION TESTING
